Response Rate: 18/21 (85.71 %)

8 - What are the best aspects of this course?

Response Rate	13/21 (61.9%)
---------------	---------------

- Very interesting content, professor is a good lecturer.
- - The exam study questions are incredibly helpful for synthesizing and processing the knowledge presented in class. - The lectures goes through the reading material again and explains it in a more understandable way. - In-class discussion are very valuable and I always enjoy the Professor's response to any and all comments (it seems like he has a ready answer to everything!) - Class always start and end on time. - The grade distributions are perfect for encouraging learning and thinking about the material but not being too stressful, and the timing are great as well.
- The readings are very interesting, and class discussions are very engaging! Professor Green is a great, engaging lecturer who clarifies the readings in a way that makes them accessible. The paper topics are very interesting, and quizzes are very fair and help check for comprehension.
- I enjoyed how insightful the professor was about the topic. Providing in-depth and e
- This course is really unique. I love that you can sort of explore the topics at hand self-guided. The professor is always willing to answer questions.
- I loved the lectures for this class and Professor EJ was great!
- Philosophy of perception really helped me learn to appreciate a field that I struggle to engage with as a sometimes pompous neuroscience student. I really appreciated EJ's deep knowledge of the field and that he was able to explain the concepts so well and engage thoughtfully with our questions.
- Class discussion
- You're a great teacher, I loving everything about the course
- No final exam and the opportunity to sate our thoughts in class. I like the professor too, he's nice.
- Fantastic material and discussions
- It's very interesting and the professor makes his lectures very easy to follow.
- The professor is a good lecturer.

9 - What are the worst aspects of this course?

Response Rate	11/21 (52.38%)
---------------	----------------

- Could be more guidance on writing papers and the way your grade is decided is not very clear.
- - Sometimes the in-class discussion questions are extremely difficult, but I think this was good in prompting me to think more deeply about each topic. - I feel quite anxious when we fell behind on the syllabus materials, and also the reading schedule was quite difficult to follow towards the end and materials get shifted back near the end of the semester.
- Studying for quizzes and writing papers can be a bit difficult, but this can be a time management problem.
- There is some disconnect within the course. It's easy to fall behind and be sort of lost, as topics move quickly and readings are intense.
- The readings were long and boring and the lectures cover all the important information anyways
- I think many people stopped attending lecture and many who did were not active participants in class discussions, which I think was a loss.
- N/A
- All of the in-class writing assignments, but I understand that they're helpful for making sure we attend class and understand the content.
- Nothing
- N/A
- I found out that I didn't particularly enjoy philosophy. I don't think it had anything to do with the course itself or how it was taught. I just don't enjoy learning about or thinking about philosophy (at least philosophy of perception anyways).

10 - What would most improve this class?

Response Rate	11/21 (52.38%)
---------------	----------------

- It was great overall but they could connect outside of class paper writing a but more.
- I can't see how this class can get any better. It was amazing.
- I wish we got prompts for essays a little sooner.
- I really enjoyed the guest speaker that came into class and spoke about her paper. I would love to see more speakers or even more connections to everyday life. How are the topics at hand actually impactful and how is research approaching it. I know there are some very impactful philosophical researchers here at JHU.
- More discussion time
- I just wish students were more active in the class discussions; perhaps a participation grade that is discussion based could motivate this?
- Make attendance and participation mandatory so that the discussion is more engaging.
- If it was a smaller, more intimate class.
- n/a
- N/A
- I think it would be better if a list of topics were given for the second essay, similar to how the first essay was assigned. I have a lot of trouble choosing topics of my own, especially when it comes to philosophical topics.

Course: AS.150.376.01.SP25: AS.150.376.

Response Rate: 18/21 (85.71 %)

11 - What should prospective students know about this course before enrolling? (You may comment on any aspect of this course such as assumed background, readings, grading systems, and so on.)

Response Rate	11/21 (52.38%)
• There are a decent amount of readings but it is very manageable and well-explained by the professor. Class is a mix of philosophy and scientific topics so you should be interested in both. • If you have no or little philosophy background, it is an extremely intimidating class to join. It wasn't until after the first exam that I felt more confident that I was doing well enough, and that I understood the topic enough even if I can't really "poke holes" in the presented information like the other philosophy majors do in class. I would say stick with the class and you will have a great experience, even if you may feel some imposter syndrome for a long while at the beginning. • Grading for this course is two quizzes and two papers. This class is definitely easier with prior philosophy experience. • There are weekly readings, which can be time consuming. Be smart about how you spend your time, and make sure to understand the theories or models. Other than that, grading is pretty lenient, and the expectations are realistic. • This is a great course for anyone interested in neuroscience, cognitive science, or philosophy of mind and is a great time overall! • It's not what you think it will be! This class is really about telling the story behind perception. • It is reading heavy but all the readings are interesting! • Background in philosophy will be helpful. • great course, get ready to think! • Do all readings, engage in class. • This course is taught well and the exams are fair. As long as you understand the lecture slides, the exams are relatively easy.
