Instructor: Anne Barnhill

Response Rate: 23/24 (95.83 %)

8 - What are the best aspects of this course?

Response Rate	18/24 (75%)
---------------	-------------

- Group discussion and debates
- debates, class structured around student responses, engaging/relevant topic
- Very thoughtful discussion of interesting topics, great workload, excellent time overall.
- The group discussions in class
- Class debates & interesting weekly discussion posts
- the grading scheme and workload for this class are very well established, and the assignments of the course solidifies the content from the course in an efficient way without overburdening students; the content of the course is interesting, and really teaches students to take a critical eye on things we may not usually consider, and the professor and TA are excellent
- I really liked how this course covered so many topics related to food ethics. I thought that the inclusion of some of the political topics was particularly interesting, and not what I would have expected from a typical philosophy course with such a narrow focus as this one.
- Minimal homework
- Very easy-going class environment
- The discussions/debates that we had in class were very interesting and insightful. The content of this course is very thought-provoking and covers a large span of topics related to food from many different perspectives. Professor Barnhill creates an open space for all thoughts to be heard and challenged. She was very understanding and communicative!
- Being able to hear and talk about topics I had always wanted to engage with but hadn't.
- group work
- The topic of the course was cool and I did like the discussions we had.
- The content and topics themselves are very interesting.
- The content is fun
- - Engaging Lectures - Light Course load - Discussions
- The discussions
- The best aspect of the course is the content. It's interesting to learn about food ethics through different perspectives and reevaluate our relationship with food.

9 - What are the worst aspects of this course?

Response Rate	15/24 (62.5%)
---------------	---------------

- Class is a bit long
- Long lecture based classes can become monotonous & easy to get distracted
- The class period (2.5 hours) is too long
- N/A
- Overall I thought the course was really good, so it is hard to pick a worst aspect. I think perhaps the only thing that I disliked, although this is not necessarily unique to this course, was that, although this was a 400 level course, because it had no prerequisites or presumed background knowledge we ended up covering a lot of basic information about ethics and political philosophy, which I had already been exposed to in some of the introductory courses I had to take.
- We are graded on very few things. The class is not very structured or organized. Class is too long and should be split into 2 days
- Need some background in politics/ethics
- The length of the class block sometimes makes it difficult to focus, but Professor Barnhill keeps things fairly engaging!
- I think we could have greater discussions about the material and maybe frameworks for getting around ethical issues within the space. I think it wasn't always as easy to catch new points of contention that I would not have already been able to know a good amount intuitively from hearing about food in my daily life. One really interesting point I remember was with that Op-Ed discussing the reasoning for why poor people tend to buy more junk food, it was a really interesting perspective on the issue that made a lot of sense after I heard about it, and I hadn't heard something like that before. I think we could have dug deeper into that case study on what changes could be made to benefit the SNAP program.
- lectures ran a little long / long course time
- I think having a one block a week class is tricky because it's really hard to keep student engagement.
- There is no real philosophical rigor to it. There was so much time spent engaging the politics of issues, like the existence of food councils, rather than the more principle philosophical questions at hand.
- It could have been more engaging
- The readings are quite long and hard to keep up with
- N/A

ASEN.2023.Fall Project 2

Course: AS.150.482.01.FA23: Food Ethics

Instructor: Anne Barnhill

Response Rate: 23/24 (95.83 %)

10 - What would most improve this class?

Response Rate	15/24 (62.5%)
---------------	---------------

- N/A
- more variety in class structure
- Breaking up the class time into two smaller class times during the week (1 hour and 15 minutes twice a week instead of 2 hours and 30 minutes once a week)
- N/A
- I think just improving on the issue mentioned above related to the need to include basic information in an upper level philosophy class, due to the lack of prerequisites or presumed background knowledge would be my only suggestion. Perhaps making it a prerequisite that students have taken at least one course in ethics prior to taking this one would solve the problem.
- Shorter classes, more structure to the lecture and slides, clearer learning objectives.
- Nothing
- More discussion/debate/applications of concepts and thoughts and less summarizing of readings for shorter lectures.
- I'm not sure, I think Dr. Barnhill's idea of having pre-recorded lectures was a very interesting format worth testing further, like a flipped classroom in some sense though it arguably already has that structure. Maybe more in class debates and on topics that very clearly have very good arguments for both sides.
- less lecture and more discussion
- I think there needed to be a participation aspect to this class, and I think the lectures needed to be more engaging. If students were forced to engage rather than having it feel like no point, the class may have gone better.
- More philosophy, less policy
- More engaging activities- the debates were fun!
- More digestible readings
- N/A

11 - What should prospective students know about this course before enrolling? (You may comment on any aspect of this course such as assumed background, readings, grading systems, and so on.)

Response Rate	14/24 (58.33%)
---------------	----------------

- weekly response, 2 short papers, 1 long final paper, no assumed background
- If you have any interest in our food system at all this class will be enjoyable! Keep up with the weekly assignments/readings and you will do great
- this is a very interesting course, workload is very good and assignments are very fair
- Students should know that, although this is a 400 level course, they do not need to have any background in ethics or philosophy to succeed in the class.
- No background info needed, interesting course but not ideal for students who find it difficult to sit still/pay attention for long periods of time
- Awesome course!
- This course is what you put into it- you will do well if you engage with the content and advocate for yourself and your thoughts, regardless of having a strong philosophy/bioethics background or not.
- It's a lot of fun, esp with Dr. Barnhill!
- good way to learn about interesting topics and debate
- The class is fun and you can learn a lot. It will not be difficult and you'll learn exactly how much you want to learn from it.
- It feels more like a 100 or 200 level philosophy class than a 400 level philosophy class.
- Start the writing assignments in advance
- n/a
- There's a lot of reading so make sure to start ahead of time.
